PROFESSIONAL EXPERIENCE

SINCH | Software Engineer II

Next Generation 911 (NG911)

August 2025 – Present

- Develop and maintain full-stack applications supporting NG911 call routing and emergency communication systems using Kotlin/Java, Spring Boot, React, and REST APIs.
- Partner with business stakeholders to translate user needs into UI functionality, including evaluating search and filtering experiences, proposing UX alternatives, and refining requirements around different user workflows.
- Research and propose UI modernization improvements through wireframes/mockups, accessibility, design consistency, and alignment with Sinch design standards, helping improve communication of proposed experiences during refinement.
- Lead AI-assisted engineering initiatives using GitHub Copilot and Claude, including UI development, repository guidance, team workflows, and engineering automation opportunities.
- Troubleshoot applications across PostgreSQL, MongoDB, Kubernetes, and OpenShift, using Datadog logs, metrics, and traces to diagnose production and environment-specific issues.
- Designed and documented a CI/CD approach for automated shared-library versioning and releases, defining the technical workflow used for implementation.
- Collaborate with Product, QA, DevOps, and engineers throughout refinement, development, testing, deployment, and production support; review Playwright UI tests, identify testing gaps, and validate application changes.

JPMORGAN CHASE & CO. | Software Engineer II

Digital Document Services (DDS)

July 2023 – August 2025

- Developed Java-based REST APIs and backend services supporting enterprise digital document systems.
- Developed the Authoriti API supporting the migration of 30M+ digital documents from MongoDB to PostgreSQL.
- Utilized AWS, Terraform, and Spinnaker to support cloud infrastructure, application configuration, and deployment workflows.
- Served as temporary Scrum Master, facilitating Agile ceremonies and coordinating work across engineering and business stakeholders.

VANGUARD | Application Engineer I / Application Engineer II

Digital Advisor • Client Experience Digital Security Lab

June 2019 – July 2023

- Engineered 10+ Java RESTful APIs on AWS supporting Digital Advisor and Personal Client platforms serving 100K+ daily users.
- Implemented WCAG-aligned accessibility improvements for customer-facing UIs, including keyboard navigation and screen-reader compatibility.
- Developed and maintained production applications while supporting debugging, incident response, and ongoing system reliability.
- Automated Splunk reporting to improve visibility into application issues and increase on-call debugging efficiency.
- Served as a Subject Matter Expert for Splunk, PagerDuty, and Honeycomb observability and monitoring tools.

EDUCATION

VILLANOVA UNIVERSITY | *B.S. in Computer Science*

May 2019
